
Call Of Duty Black Ops WIN IMPROPER QUIT BODY Patch

```
[root@yuyan211 ~]# nvidia-container-cli --load-kmods configure --help
Usage: nvidia-container-cli configure [OPTION...] ROOTFS
Configure a container with GPU support by exposing device drivers to it.

This command enters the namespace of the container process referred by PID (or
the current parent process if none specified) and performs the necessary steps
to ensure that the given capabilities are available inside the container.
It is assumed that the container has been created but not yet started, and the
host filesystem is accessible (i.e. chroot/pivot_root hasn't been called).

Options:
  -?, --help                Give this help list
  -c, --compute              Enable compute capability
  --compat32                 Enable 32bits compatibility
  -d, --device=ID           Device UUID(s) or index(es) to isolate
  -D, --display              Enable display capability
  -g, --graphics             Enable graphics capability
  -l, --ldconfig=PATH       Path to the ldconfig binary
  --no-cgroups               Don't use cgroup enforcement
  --no-devbind               Don't bind mount devices
  -p, --pid=PID              Container PID
  -r, --require=EXPR         Check container requirements
  -u, --utility              Enable utility capability
  --usage                     Give a short usage message
  -v, --video                Enable video capability
  -V, --version              Print program version

Mandatory or optional arguments to long options are also mandatory or optional
for any corresponding short options.
